WalleX - A Mimblewimble DeFi Platform

Atomis was created with a simple idea: Create an end-to-end solution for private cryptocurrency transactions using smart contracts

With the launch on March 10th, we saw an explosion of Atomis— BTC swap trading activity in the Atomis wallet. This validated our belief that the market needs an alternative to centralized exchanges. Many projects do not prioritize privacy or decentralization and that needs to change.

Atomis mission is to create a platform where traders and investors have a convenient method to freely swap crypto assets in a product that combines the best features of a custodial exchange & wallet.

We are introducing a solution that addresses this need called WalleX.

The problem with centralized exchanges are similar to commercial banks. They hold large amounts of capital and serve as a single point of failure. You have to trust these institutions to not censor or withhold funds in the event of a crisis.

Banks and centralized exchanges have custody of your money which if they fail or their servers are compromised, you can lose everything you trusted them to safeguard. This is why cryptocurrencies are revolutionary. They return the power of ownership of one's wealth back to the individual.

Exchange Policy

Exchanges are targets for hackers. Crypto has seen a wide variety of exchange hacks since the early days of Mt. Gox. We aren't against exchanges. In fact, we believe they are necessary in the short-term for investor liquidity and greater visibility for Atomis. Longer-term the trend should be more decentralization for trading and our community & product will be developed to capture that opportunity.

We intend to list Atomis on as many exchanges as possible to help bootstrap the network and bring more activity to WalleX DeFi trading platform. Also, we intend to use API endpoints to distribute WalleX listings for syndication across a wide variety of exchanges. This will allow for more buyers and sellers to get marketplace listing access.

Over time, we envision WalleX to command a leading position in the decentralized exchange market and serve as the main trustless path for swapping cryptocurrencies.

The Roadmap

Our belief is that the future is decentralized. We have set out to build a DeFi platform that serves the needs of the crypto community in an environment of increasing regulations and uncertainty.

The initial assets we plan to develop, along with existing Bitcoin, Litecoin & Qtum are the following:

1. **Ethereum**—Open financial access will be the defining accomplishment of blockchain technology. Ethereum's robust ecosystem of developers and forthcoming Ethereum 2.0 creates a huge opportunity to bridge the gap between Atomis private store of value and Ethereum's decentralized financial movement. Our top priority is working on developing WalleX to include Ether and erc-20 tokens. This isn't a trivial matter and will require a substantial amount of development resources to accomplish but we are committed to delivering a beta product by early Q3 2020.

2. **Bitcoin Cash**—While Bitcoin was an obvious choice to include on launch, Bitcoin Cash is doing excellent development to make BCH an everyday currency for the masses.

Roger Ver is determined to move fast and has the flexibility with his core developers to push the envelope on the capabilities of the Bitcoin framework and we believe Bitcoin Cash is going to be a transactional currency while Bitcoin develops into digital gold.

3. **New Projects**—Far too often, newer projects don't receive the visibility of more established projects. We intend to support projects and developers that have a great vision and purpose.

Mobile

Mobile wallets are key to providing our users with the best experience possible. iOS and Andriod apps will be provided by team if bounties are not claimed by end of Q2 2020.

Our Rollout

Phase 1 (Q1 2020)—Launch, Community Building & Strategic Roadmap Publication

Phase 2 (Q2 2020)—Add New Crypto Assets: Bitcoin Cash + New Project(s) into WalleX, Release Mobile Wallets & Secure Exchange Listings

Phase 3 (Q3 2020)—Deploy Ether (*beta)* into WalleX, Add 10 Additional Crypto Assets & API endpoints for Exchange Distribution

Phase 4 (Q4 2020+)—Enhance Smart Contract Functionality + Add More Crypto Assets

Journey Ahead

The focus of our mission is building the best wallet + exchange experience into WalleX. We are off to a great start and believe the community will serve as a foundation to foster new ideas and improvements to the Atomis DeFi platform.

Join us at any of the forums below and let's shape the future of finance with a product that delivers on the vision where crypto assets are moved around the globe from the convenience of a smartphone.
